# Relationship between Income and General Health in married individuals

This graph was made to see if there is a relationship between the income in married individuals and their general health, ordered by income level.

Legend:

GENHLTH = 1 means Excellent
GENHLTH = 2 means Very good
GENHLTH = 3 means Good
GENHLTH = 4 means Fair
GENHLTH = 5 means Poor

Analysis

Although there is not a very strong trend between income and general health, we can see that in low incomes (below $11,000) the general health is either poor or fair. Additionally, if income is high, the general health is excellent or very good.
